

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

In the Claims:

Please amend the claims as follows:

1. (Previously Presented) A method of providing electronic procurement to a purchasing entity comprising:

accessing a database containing variable elements of an on-line catalog, the elements including items suppliable by a vendor;

constructing an electronic catalog having one or more pages by selecting elements to be included in the pages, and providing commercial terms applicable to the included elements, where the selecting and providing steps are performed consistent with contract terms between the purchasing entity and the vendor, wherein said commercial terms include both intrinsic terms and extrinsic terms;

providing electronic access to the catalog to users authorized by the purchasing entity;

providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of elements the user may wish to select;

providing a selected page of the catalog to the user in response to user input; and

forwarding an order to a vendor for fulfillment, wherein the order includes the intrinsic and extrinsic terms required to satisfy the order.

2. (Previously Presented) A system for an electronic procurement site comprising:

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

a database including a plurality of variable elements of an on-line catalog, the elements including items suppliable by a vendor;

a server coupled to the database providing an access interface to access and read from said database, said server providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of elements the user may wish to select; and

a computer readable media having encoded thereon a plurality of web documents forming pages of an electronic catalog, the web documents generated from elements selected in accordance with contract terms between a purchasing entity and the vendor, and at least one web document containing commercial terms applicable to the selected elements, wherein said commercial terms include both intrinsic terms and extrinsic terms;

wherein said server provides electronic access to the catalog to users authorized by the purchasing entity and forwards an order by the user to a vendor for fulfillment, wherein the order includes the intrinsic and extrinsic terms required to satisfy the order.

3. (Previously Presented) A method of providing electronic procurement to a purchasing entity comprising:

accessing a database containing dynamic elements of an on-line catalog, the elements including items suppliable by a vendor;

constructing an electronic catalog having one or more pages by selecting elements to be included in the pages, and generating commercial terms applicable to the included elements;

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

where the selecting and generating steps are performed in accordance with contract terms between the purchasing entity and the vendor, wherein said commercial terms include both intrinsic terms and extrinsic terms;

providing electronic access to the catalog to users authorized by the purchasing entity;

providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of elements the user may wish to select;

accepting browsing commands from the user to display catalog pages selected by the user;

providing an electronic shopping basket function configured to hold the identification of items chosen by the user from the displayed catalog pages;

sending contents of the electronic shopping basket to a vendor for fulfillment of the identified items to the purchasing entity in accordance with the contract terms, wherein the sending includes sending both the intrinsic and extrinsic terms required to satisfy the order; and

collecting a fee from the purchasing entity that is based on the value of the contents of the electronic shopping basket.

4. (Previously Presented) A method of hosting an electronic procurement site ("e-procurement") by a host, the method comprising:

providing an web-based interface for a user to access the e-procurement site;

identifying the user's level of authorization when accessing the site to thereby engage in an e-procurement session with the host;

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

generating a plurality of web pages to form a user-specific catalog which includes a set of deliverables that may be supplied by a supplier to a purchasing entity, wherein items contained in the set of deliverables and commercial terms for the supply of the deliverables are determined between the supplier and the purchasing entity in advance of the e-procurement session, wherein said commercial terms include both intrinsic terms and extrinsic terms;

providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of deliverables the user may wish to select;

connecting the user through the web-based interface to catalog pages selected in response to the authorization level; and

forwarding an order from a user to a vendor for fulfillment, wherein the order includes the intrinsic and extrinsic terms required to satisfy the order.

5. (Previously Presented) A method of fulfilling electronic orders, the method comprising:

providing a user electronic access to a catalog of deliverables that may be ordered by the user where the catalog is constructed according to terms of a contract for purchase and sale of deliverables between a purchasing entity and a supplier, wherein said terms include both intrinsic terms and extrinsic terms;

providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of deliverables the user may wish to select;

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

accepting browsing commands from the user to display catalog pages selected by the user;

providing an electronic shopping basket function configured to hold the identification of items chosen by the user from the displayed catalog pages; and

sending contents of the electronic shopping basket to a vendor for fulfillment of the identified items to the purchasing entity in accordance with the contract terms, wherein said sending includes sending both the intrinsic and extrinsic terms required to satisfy the order.

6. (Previously Presented) A method of hosting an electronic procurement site ("e-procurement") by a host comprising:

providing an web-based interface for a user to access the e-procurement site to thereby engage in an e-procurement session with the host;

receiving user information when accessing the site;

generating one or more web-page listing items and prices associated with the listed items supplyable by an OEM to a purchasing entity, where the listed items and prices are determined between the OEM and the purchasing entity in advance of the e-procurement session, wherein said generating includes using commercial terms of a pre-established contract between the OEM and the purchasing entity, and the commercial terms include both intrinsic terms and extrinsic terms;

connecting the user through the web-based interface to selected ones of the user-specific web-page where the selection is performed in response to the user information;

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

providing an interface to one or more documents that an authorized user can access,
which one or more documents include the commercial terms applicable to a set of items the user
may wish to select;

accepting an order for a listed item at the associated price from the user;

forwarding the order to a VAR for fulfillment of the ordered listed item at the associated
price to the purchasing entity, wherein the order includes both the intrinsic and extrinsic terms
required to fulfill the order;

tracking the order on demand from the user; and

reporting the status of the tracked order on demand from the user.

7. (Previously Presented) A method of providing electronic procurement from a host to a
user within an organization comprising:

constructing a set of purchasable items incorporating a pre-established standard of the
organization, wherein said pre-established standard includes both intrinsic terms and extrinsic
terms;

providing an electronic interface between the host and the user;

providing an interface to one or more documents that an authorized user can access,
which one or more documents include the commercial terms applicable to a set of items the user
may wish to select;

determining a subset of items for display to the user, and associated data for each of the
displayed items, consistent with the pre-established standard; and

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

forwarding an order for selected ones of the displayed items selected by the user to a vendor where the vendor and host agreed in advance of the forwarding that the order will be fulfilled in accordance with the pre-established standard, wherein the order includes both the intrinsic and extrinsic terms required to fulfill the order.

8. (Previously Presented) A method of providing automated procurement from a host to a user within an organization comprising:

constructing a set of items purchasable by the organization in accordance with terms of a pre-established contract between an original equipment manufacturer and the organization, wherein said contract includes both intrinsic terms and extrinsic terms;

providing an web-based interface between the host and user for user access to displayable web-pages;

wherein said web-based interface provides an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of items the user may wish to select;

determining, in response to user request for access, a subset of items for display on web-pages and associated pricing for each item in the subset consistent with the contract and both the intrinsic terms and extrinsic terms; and

forwarding an order for user-selected ones of the items in the subset to a value added reseller where the value added reseller and host agree in advance of the forwarding that the order will be fulfilled in accordance with the terms of the contract, wherein the order includes both the intrinsic and extrinsic terms required to fulfill the order.

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

9. (Previously Presented) A system for enabling automated procurement between a host and a user within an organization comprising:

a database containing a set of items purchasable by the organization in accordance with pre-established terms of a contract between an original equipment manufacturer and the organization and further containing decision rules derived from the contract terms, wherein said contract terms include both intrinsic terms and extrinsic terms;

a server providing a web-based interface for electronic communication between the host and the user, said server providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of items the user may wish to select;

a processor coupled to the database for determining a subset of items for display on web-pages at the user's location and associated pricing for each item in the subset in accordance with the rules and user instructions received through the interface; and

a communications link coupled to the processor for forwarding an order for user-selected ones of the items in the subset to a value added reseller where the value added reseller and host and agree in advance of the forwarding that the order will be fulfilled in accordance with the terms of the pre-established contract, wherein the order includes both the intrinsic terms and extrinsic terms required to fulfill the order.

10. (Previously Presented) A method of providing web-based procurement from a host to a user within an organization comprising:

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

constructing a set of items purchasable by the organization in accordance with pre-established terms of a contract between an original equipment manufacturer and the organization, wherein said terms include both intrinsic terms and extrinsic terms;

providing an web-based interface between the host and the user; in response to user instructions received through the interface, determining a subset of items for display on web-pages and associated pricing for each item in the subset consistent with the contract, said web-based interface providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of items the user may wish to select;

sending the subset of items and associated pricing for display on web-pages, the currency for the displayed associated pricing being selectable by the user;

accepting an order for user-selected ones of the items in the subset where the user-selecting function and total monetary value of the order is subject to limits authorized by the organization; and

forwarding the accepted order to a value added reseller where the value added reseller and host and agree in advance of the forwarding that the order will be fulfilled in accordance with the terms of the contract, wherein the order includes both the intrinsic terms and extrinsic terms required to fulfill the order.

11. (Previously Presented) A method of fulfilling electronic ordering comprising:

constructing a catalog of a set of deliverables, members included within the set and prices associated with each member are established between a purchasing entity and a supplier prior to

U.S. Patent Application No. 10/052,900
Attorney Docket No. 1011/1

the electronic ordering, wherein said constructing includes using both intrinsic terms and extrinsic terms of an agreement between the purchasing entity and supplier;

providing an interface to one or more documents that an authorized user can access, which one or more documents include the commercial terms applicable to a set of deliverables the user may wish to select;

making the constructed catalog available on-line to users authorized by the purchasing entity;

receiving orders for the deliverables from the authorized users; and

generating, from the received orders, purchase orders to a vendor to initiate fulfillment of the ordered deliverables to a location designated by the user or purchasing entity in accordance with the established terms, wherein the purchase orders include both the intrinsic terms and extrinsic terms required to fulfill the order.
